Business Case

Problem, Goals, Benefits & Success Measures

ServiceFlow

Customer Service Improvement & Project Delivery Plan

Prepared for: NovaCare Services

Prepared by: Maleesha Nanayakkara, Business Analyst & Project Manager (Intern)

Codezela Career Accelerator — Business Analysis & Project Management Internship

1. Executive Summary

NovaCare Services, a home repair and maintenance booking company, currently manages customer service requests through phone calls, WhatsApp messages, Excel sheets and paper notes. This fragmented, manual approach causes missed and delayed requests, unclear task ownership, poor visibility for managers, and inconsistent communication with customers.

This business case proposes ServiceFlow a Customer Service Request and Appointment Tracking System as the recommended solution. It sets out the problem, the business impact of not acting, the proposed solution and scope, the expected benefits, and how success will be measured.

2. Problem Statement

Many service teams, including NovaCare, still manage customer requests through calls, WhatsApp messages and scattered spreadsheets. As the business grows, this approach does not scale and creates the following recurring problems:

Problem	Description
No single request list	Staff use different places to record work, so nothing is centrally visible.
Unclear ownership	Nobody can quickly see who is responsible for a given request.
Poor status tracking	Open, scheduled, completed, and cancelled requests are mixed.
Customer delays	Customers call to ask for updates because the team cannot track progress.
Weak reporting	Managers do not know daily workload or overdue tasks without manually asking staff.

3. Business Impact

If this problem is not addressed, NovaCare faces the following ongoing risks and costs:

- Lost revenue and reputational damage from missed or delayed customer requests.
- Reduced staff productivity from duplicated effort and unclear task ownership.
- Reduced customer satisfaction and loyalty due to inconsistent communication.
- Limited management visibility, making it difficult to plan staff workload or identify overdue work early.
- Inconsistent service records, which makes reporting, quality control and staff accountability difficult as the business scales.

4. Proposed Solution

A Customer Service Request and Appointment Tracking System ("ServiceFlow") that gives NovaCare a single place to log, assign, schedule, track, and report on every service request from first enquiry through to completion.

The recommended solution type is a lightweight internal web application. This is recommended because it needs to be accessible to both office-based admin staff and field-based service staff, requires simple role-based views, and must be deliverable within a short timeframe without a large development budget.

Options considered.

Option	Description	Assessment
A	Keep the current process	Rejected. Calls, WhatsApp, Excel, and paper notes do not give one request list, clear ownership or reporting, and the problems grow as the business grows.
B	Improve the shared Excel sheet	Rejected. Still manual, with no enforced status rules, no role-based views, and no safe way for field staff to see only their own jobs.
C	Configure an off-the-shelf CRM module	Not recommended now. More features, cost, and training than the core need requires; can be revisited in a later phase.
D	Lightweight internal web application (custom-built or on a low-code platform)	Recommended. Covers all six goals, is simple to adopt, works on desktop and mobile browsers, and can be delivered in about six weeks.

This business case, and the accompanying delivery pack, defines what should be built and how the project should be delivered. It does not build the software itself the final pack is intended to be handed to a design, development, or operations team to execute.

5. Goals and Benefits

Goal	Benefit to the Business
Request visibility	All requests visible in one place, eliminating lost or duplicated work.
Better scheduling	Staff, dates, and priorities assigned clearly, reducing missed appointments.
Clear status flow	Every request tracked from New to Completed, reducing confusion over ownership.
Customer communication	Consistent contact notes and updates, improving customer satisfaction.
Manager reporting	Real-time visibility of workload and overdue requests supports better decisions.
Controlled delivery	A clearly scoped, planned project reduces delivery risk and rework.

6. Success Measures

The success of ServiceFlow will be judged against the following measurable targets, tracked from go-live:

- 100% of new service requests logged in ServiceFlow within 1 business day of go-live.
- Reduction in missed or delayed appointments, targeted at 50% within the first two months of use.
- Average status update turnaround to customers reduced to under 24 hours.

- Managers able to view daily workload and overdue requests in under 1 minute, with no manual compilation.
- Successful UAT sign-off against 100% of "Must have" acceptance criteria before go-live.

7. Recommendation

It is recommended that NovaCare's leadership approve this business case and the accompanying delivery pack (Stakeholder Pack, Requirements Pack, Process Pack and Project Plan) as the basis for commissioning a build phase for ServiceFlow.
